

# Upgrading your home? Don't forget the alarm system.

A professionally monitored home alarm system adds value to your investment in more ways than one. If a home-remodel project is on your agenda, or if you're currently remodeling, now is the time to call an experienced home alarm company like Bay Alarm—not afterwards. Here's why:

## ***You'll get a fully integrated system***

With alarm systems, visually appealing means out of sight. Installing your alarm system during a home improvement project allows us to easily hide wires, hard-wire motion sensors, and give you a system that's perfectly and flawlessly integrated with your home's design features.

## ***You'll save money***

Time is money. With contractors already working on your home, you stand to save up to 30% on labor costs associated with your alarm system installation. Save even more time and money by having fire and carbon monoxide detectors installed while your contractors are on the job.

## ***You'll save time***

Alarm system installation is faster when it's done along with remodeling contractors. Bay Alarm installers know how to work with your home contractors to get the job done in less time than usual.

## ***You'll add value to your home***

...in two ways: A professionally installed and monitored home security system, along with fire and carbon monoxide detectors, will automatically increase the monetary value of your house. But more important, it will give you peace of mind. A system from Bay Alarm communicates with our own local alarm monitoring station agents who can dispatch the police or fire department to your house quickly in an emergency. You can't put a price tag on that.

Call us at 800-610-1000, or visit us at [bayalarm.com](http://bayalarm.com), and we'll tell you how you can save time and money while increasing your home's value by having an alarm system installed during your remodeling project.
